

Dino Chutes, Inc. premium parachute

Thank you for your purchase of a Dino Chutes, Inc. premium parachute.

All you need to do to prepare the parachute for attaching to your rocket is to tie a simple overhand knot in the bottom ends of the loops. Just gather all the loops together, hold on to the top of the parachute to ensure your knot will be centered in these loops, then tie the knot.

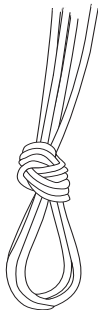

This loop allows you to have an attachment point for attaching the parachute to your rocket. Follow the manufacturer's instructions for your rocket on how to attach the parachute to their particular kit.

This parachute is made from ripstop nylon and can be hand washed using a gentle detergent, then left to air dry.

You'll need to provide protection from the rocket's hot ejection gases by always using some sort of parachute protection. Always make sure that your parachute is in good enough condition to fly by inspecting it prior to each flight. Ensure there are no holes in your parachute and that all of the shroud lines are secure.

Additional information on the use of this parachute can be found at our website www.dinochutes.com. Feel free to contact us if you have any questions.

Your use of this product is subject to the terms and conditions provided on our website.
